1 New Functionality

Although the version number for the *HP TP Desktop Connector* for ACMS product is updated, the *HP TP Desktop Connector Gateway* for ACMS kit is identical to the previous release.

2 Problems Fixed

Following is the problem fixed in this release:

TP Desktop Connector clients were unable to logon to the applications if the PWDMIX sysuaf flag was set to their OpenVMS account. This problem is fixed (WFM 3217809468-321).

With this release, by default, the case-sensitivity of the password will be set as UPPER case if the Mixed Case flag is not set in the SYSUAF file. Also, the mixed case password is supported on TP Desktop Connector.

3 Restrictions

3.1 Avertz Sample

The Avertz sample application provided in this release has been built using RDB Version 6.1. To run the sample on an earlier version of RDB requires rebuilding first.

3.2 ACMS ADU Extensions

The following release notes apply to the HP ACMS ADU Extensions. These extensions are no longer installed from the *HP TP Desktop Connector* for ACMS installation kit. They are included with HP ACMS 4.2-2 and higher.

- The HP ACMS Application Definition Utility (ADU) Extensions require HP ACMS for OpenVMS Version 8.2 Development or Runtime.
- The STDL output file from ADU is always written to the default directory. It is not affected by the DEFAULT TASK GROUP FILE clause in the group definition.
- The following CDD data types are unsupported:

VARYING STRING
SEGMENTED STRING
H_FLOATING
H_FLOATING COMPLEX
POINTER
BIT

Unsupported CDD data types produce a valid STDL file. When building or linking a group definition with one of these data types, a warning will be generated:

```
%ACMSTDU-W-WEB_UNSUPDTYPE, Unsupported Datatype  
    'Segmented String'.
```

The STDL file generates an ARRAY OF OCTET of the appropriate size with a comment such as:

```
!The unsupported datatype UNKNOWN VMS DATA TYPE  
!has been defined as an OCTET ARRAY.
```

- The VARIANT/VARIANT CDD data type attribute is unsupported and prevents the generation of an STDL file. The following warning is generated when building or linking a group definition:

```
%ACMSTDU-W-WEB_VARIANT, 'variants not supported'
```
