To: Valued Customers

Subject: RoHS compliance

SANYO capacitors contain no measurable content of any of the RoHS restricted substances except for Lead.

With respect to **Lead content**, our current situation of RoHS compliance is as follows,

1. POSCAP™ :

All the POSCAP products are already RoHS compliant.

2. OS-CON™ :

All the OS-CON products are RoHS compliant from Jan 2005.

[Note]

*SA, SC, SF, SH, SL, SP, SPA, and SS series* (TCNQ type) have changed to RoHS compliant and finished this transition within 2004.

*SVP, SVPA, SVPB, SVPC, SVPD, SVQP, SEP, SEQP, and SEPC series* (Polymer type) are originally RoHS compliant.

3. Aluminum Electrolytic Capacitors:

Current **CV** series and **MV** series contain Lead in the plating on their lead line. On the other hand, we are also producing their Lead-free alternatives, **CE** series and **ME** series. The updated availability of Lead-free products will be delivered to you at your request.

If you have further question, please feel free to contact us at all time.

Sincerely yours,

Person responsible: Kenji Takahashi

Chief official of Environment
