

PC INTERN

SYSTEM PROGRAMMING

***The Encyclopedia
of Programming
Know How***

Michael Tischer

Since we've printed the first copy of PC Intern we've received excellent reviews and comments from reviewers and customers like yourself. The following is a sample of their suggestions and comments:

"This book is a necessity for the serious programmer." J.W., IL

"I'm a high School student taking a pascal course and this informative book has put me miles ahead of the class." G.T., NJ

"This book is the best one I've read this year." A.W., Syria

"Well done. One of the most used references in my library." B.S., VA

"Best computer book I've ever seen..." B.S., NE

"Just a great book." H.N., CA

"How Comprehensive! So much information in just one book." W.V., TN

"Great book, used the at clock driver right off the bat and save myself a \$65.00 service call." E.R., OH

"Looks like a comprehensive single volume reference source...It is like an encyclopedia." A.H., MA

"The secrets finally explained in a thorough and readable manner-the best computer book I have ever seen." S.J., CA

"PC Intern is an awesome book ..." S.T., WA

"This book is full of treasures of knowledge and should be read by every program." Q.A., Netherlands

"PC Intern is the best DOS book I've purchased." P.D., MD

"Valuable Resource for DOS/PC based application programmers." M.R., FL

"Great book! Lots of useful information saved my butt!!" D.R., CA

"This book is exactly what I've been looking for." P.C., UT

"Excellent information source code and companion disk make it a 'must have' for beginning programs." C.X., WA

"An excellent book with hard to find PC information." B.R., WA

"Is an outstanding book. We need more books at this level." W.S., TX

"Excellent! Very informative. Superb examples." P.D., CA

"Great book, it's many in one, thanks!" C.G., VT

"Big book, big price, lots of good stuff." H.C., CT

"Great, detailed book on important topics." M.M., NJ

"I like the combined language support this book has very wide range of information." A.R., TX

"The best book about PC Programming I have ever read! Superb! Excellent." K.A., Finland

"Excellent book, exactly what I was looking for to learn PC System Programming." D.K., NY

"In love with book!!" H.C., MO

"The book is worth its weight. Keep up the good work!" A.P., Argentina

"Excellent reference." F.P., OH

"Great! Infinitely better than the competition." D.F., TX

"Good info without B.S. & fluff" S.B., HI

"Very good, nice...I should say 'excellent'" G.K., CA

"This looks like it will be the best encyclopedia available." J M, VA

"Interesting... Excellent Book" T.P., OK

"Excellent; Very thorough coverage and extremely readable; the most complete reference on my shelf"
D.H., NC

"Extremely pleased...well written and explained topics..." G J, TX

"Great Book! Great Reference!" T.M., AL

"I've been looking for this type of book for a long time. It's very in-depth & and an excellent reference"
T.M., MI

"Excellent book. Just what a beginning or intermediate programmer needs to know, well organized"
D.S., IL

"I really like this book because it tells you how to do things I've been wanting to know." J.T., CO

"Excellent book!" S.S., NM

"Very informative and useful for programmers working on PC" T.G., Singapore

"An excellent programming book-it covers the two most widely used languages-Pascal & C" R.H., CO

"I appreciate the completeness of this volume & hope to learn much from it" D.A., NE

"I cut the back off 1/8" and installed in a 3 ring note book this makes it better to use as a reference..."
R.M., NJ

"This has been a good reference book for me! I like the packaged diskettes. Saves a lot of time for learning rather than typing." G.P., PQ

"I like the in-depth nature of the book!" D.L., CA

"Extraordinary Book ..." D.E., WA

"Excellent book. I've been looking for this for years." E.P., VA

Table Of Contents

<i>Chapter 1</i>	
System Programming Basics	1
What Is System Programming?	1
The Three-Layer Model	1
Basics Of PC Hardware	3
Birth of the PC	3
The Bus	4
Support chips	6
Memory layout	8
After the PC	10
The Processor	11
The PC's brain	11
Processor registers	12
Memory addresses	15
Ports	19
Interrupts	20
Software interrupts	20
Interrupt vector table	21
Hardware interrupts	24
System Interaction	27
The Pentium Processor	28
Program execution	30
The Cache	32
Floating-point unit	38
Other features	39

*Chapter 2****System Programming In Practice*** **41**

QuickBASIC	41
QuickBASIC data types	41
Calling interrupts from QuickBASIC	45
Buffers and QuickBASIC	47
Turbo Pascal	48
Turbo Pascal data types	48
Calling interrupts from Turbo Pascal	52
Buffers and Turbo Pascal	54
Port access in Turbo Pascal	55
The C Language	56
C data types	56
Calling interrupts from C	60
Buffers and the C language	62
Port access in C	64

*Chapter 3****The BIOS (Basic Input/Output System)*** **67**

The BIOS Standard	67
POST	68
Determining BIOS Version	70
BIOS Variables	71

*Chapter 4****A Closer Look At Video Cards*** **81**

History And Highlights	81
The Video BIOS	84
Determining Video Card Type	93

Anatomy Of A Video Card	95
Video RAM	101
The IBM Monochrome Display Adapter (MDA)	105
The Hercules Graphics Card (HGC)	108
The IBM Color/Graphics Adapter (CGA)	112
EGA and VGA Cards	120
Monitors and cards	120
Selecting and programming fonts	122
Smooth scrolling	134
Disabling the screen	140
Understanding bitplanes	141
The 16 color EGA and VGA graphics modes	150
The VGA 256 color graphics modes	154
Freely selectable colors	159
Sprites	165
EGA and VGA card registers	178
Super VGA Cards	202
The VESA standard	207

Chapter 5

The Interrupt Controller **215**

The inner life of the interrupt controller	215
The PIC connections	216
Cascading	219
Initializing a PIC	220
Control and inquiry of PICs - OCWs	222
Communication between the PIC and an interrupt handler	223
Unused PIC capabilities	224
Sample program	224

*Chapter 6****The DMA Controller* 227**

Channels and priorities	228
The DMA controller connections	228
The DMA controller registers	230
DMA-segment overflow	232
DMA architecture in the PC/XT or AT	233
16-bit transfers	234
Modes of operation and auto-initialization	234
Programming the DMA controller	235

*Chapter 7****Serial Port* 241**

Asynchronous Communication	242
RS-232	245
RS-232 connectors and ports	245
Modem communication protocol	246
Inside The Serial Port	247
UART registers	248
Polling or interrupt	249
Access to registers	249
Initializing the UART	250
Current UART status	251
Modem registers	253
Successors to the 8250	255
Accessing The Serial Port From The BIOS	257

*Chapter 8****The Parallel Port* 259**

Accessing The Parallel Port From BIOS	259
Calling the BIOS functions	261
Redirecting the BIOS printer interrupt	261

Direct Programming And The Parallel Port	262
The I/O ports	263
Port registers	263
Communication between printer and host	265
The Cable	266

Chapter 9

Keyboard Programming **275**

Keyboard Programming Basics	275
Keyboard to program	275
PC Keyboards	277
Accessing The Keyboard From The BIOS	279
Interrupt 16H functions	279
Reading MF-II keyboards	286
The BIOS keyboard interrupt variables	290
Scan codes	292
The Keyboard Interrupt Handler	293
Accessing BIOS keyboard interrupt 16H	293
Redirecting keyboard hardware interrupts	295
Programming The Keyboard Controller	295
Typematic rate	296
LEDs	299

Chapter 10

Joysticks **301**

Reading Joysticks From BIOS	301
Demonstration Programs	303

Chapter 11

Mouse Programming **305**

Mouse Functions	305
Demonstration Programs	313
Mouse - PC Communication	316

*Chapter 12****Memory Expansion* 317**

Expanded Memory	319
History of the LIM standard	320
EMS Version 3.2	320
Extended Memory	323
Extended memory access from BIOS	324
Conflicts in extended memory	327
Direct HMA access from real mode	329
The XMS standard	332

*Chapter 13****Sound On Your PC* 337**

*Chapter 14****Diskettes And Hard Drives* 341**

Floppy Diskette And Hard Drive Structure	341
Disk Drives And Diskette Formats	343
Accessing Floppy Disk Drives With The BIOS	346
Using BIOS To Access The Hard Drives	355
Hard Drives And Their Controllers	358
ST506 controller	359
ESDI controllers	360
SCSI controllers	361
IDE	361
From controller to memory	362
Recording Information On The Hard Drive	363
FM method	364
MFM method	364
RLL method	365

Hard Drive Advancements	366
Interleaving and the interleave factor	366
Track and cylinder skewing	368
Multiple zone recording	369
Error correction	369
Other hard drive components	370
Access times	371
Hard Drive Partitions	372
Examining the partition structure	375

*Chapter 15****Accessing And Programming The AT Realtime Clock*** **377**

Reading The Date And Time From BIOS	377
Reading And Setting The Realtime Clock	379
Configuration Data And Battery Operated RAM	383
Demonstration programs	385

*Chapter 16****System Configuration And Processor Types*** **387**

Determining The Configuration Using The BIOS	387
Reading the hardware environment	387
Determining RAM configuration using the BIOS	389
Demonstration programs	389
Determining Processor And Coprocessor	390
Determining the processor type	390
Coprocessor Test	395
Demonstration programs	396

*Chapter 17****A Brief History Of DOS*** **397**

DOS Development	397
------------------------------	------------

*Chapter 18****Internal Structure Of DOS* 403****Components Of DOS 403****Bootting DOS 405**

*Chapter 19****COM And EXE Programs* 407****Differences Between COM And EXE Programs 407****COM Programs 408****EXE Programs 411****EXE vs. COM 411****The PSP 413**

*Chapter 20****Character Input And Output From DOS* 415****Handle Functions 415****Traditional DOS Functions 417****Toggling Between Raw And Cooked Modes 419****DOS Filters 420****A Filter Demonstration Program 421**

*Chapter 21****File Management In DOS* 423****Two Sides Of DOS 423****Handle Functions 423****FCB Functions 425**

<i>Chapter 22</i>	
<i>Accessing DOS Directories</i>	431
Searching For Files Using FCB Functions	433
Searching For Files Using Handle Functions	434
<i>Chapter 23</i>	
<i>Date And Time</i>	437
<i>Chapter 24</i>	
<i>RAM Management</i>	439
DOS RAM Management	439
Where Does Memory Come From?	441
Viewing Memory Allocation	444
Behind The Scenes Of Memory Management	445
<i>Chapter 25</i>	
<i>The EXEC Function</i>	453
<i>Chapter 26</i>	
<i>Control Break And Critical Error Interrupts</i>	459
<i>Chapter 27</i>	
<i>Device Drivers</i>	463
Device Drivers Under DOS	463
Character device drivers	465
Block device drivers	465
Device driver access	466
Structure Of A Device Driver	466
Device Driver Functions	469
Clock Drivers	481
Device Driver Calls From DOS	481

Direct Device Driver Access: IOCTL	482
Tips On Developing Device Drivers	484
Driver Examples	484
EXE Programs As Device Drivers	488
CD-ROMs	489

*Chapter 28**The DOS File System 491*

Basic Structure Of The File System	491
The Boot Sector	492
The File Allocation Table (FAT)	493
The Root Directory	497
Subdirectories	499
Diskette Formats	501

*Chapter 29**The Multiplexer (Interrupt 27H) 503*

How The Multiplexer Operates	503
How DOS Programs Use The Multiplexer	505

*Chapter 30**Network Programming 509*

Basics Of Network Programming	509
Network Programming Under DOS	511

*Chapter 31**DOS And Windows 517*

Sensing Windows	517
-----------------------	-----

*Chapter 32**Maintaining Compatibility 519*

*Chapter 33****Undocumented DOS Structures* 521****Documented And Undocumented Structures 521****The DOS Info Block (DIB)..... 521**

*Chapter 34****DOS 6.x* 525****DoubleSpace 525**

Data compression..... 525

*Chapter 35****Terminate And Stay Resident Programs* 543****Activating A TSR Program 543****TSR Programs In Pascal And C..... 548**

Assembly language modules 548

The interrupt handler 552

The Pascal and C programs 556

A Few Tips..... 561

*Chapter 36****Protected Mode, DOS Extensions, DPMI/VCPI* 563****Protected Mode..... 563**

Characteristics of multitasking operating systems 563

80286 Protected mode 565

Protected mode on the 80386 and 80486 580

Virtual-86 mode 588

Protected Mode Utilities 589

EMS Emulators and memory management programs 589

Multitaskers 591

DOS Extensions 593

The Demands of Protected mode 593

DOS Extensions for the 80286	596
DOS Extensions for the 80386	598
DPMI and VCPI	600
VCPI	601
DPMI	606

Chapter 37

CD-ROM And Its Technology **615**

CD Formats	615
The physical format	615
High Sierra represents the logical format	624
Integrating CD-ROM Drives Into A DOS/Windows Environment ..	628
Accessing The CD Using The MSCDEX API	629
Accessing The CD Using The CD-ROM Driver	638
Program Examples	661

Chapter 38

Sound Blaster And Compatible Cards **665**

The Family Of Sound Blaster Cards	665
FM Synthesis	666
The physical nature of sounds and frequency modulation	666
Making sound with operator cells and channels	669
Setting the generator cells	673
Setting the channels	676
FM Programming	678
Sampling	680
DSP Basics	681
Accessing the DSP	687
DSP Commands	690
DSP Commands in detail	697
Hard drive recording in practice	709

The Mixer	709
CT1335 mixer	710
CT1345 Mixer	711
CT1745 Mixer	713
Programming the mixers	715
Speech Output	717
Sample programs	720
 Index	 723

Appendix A - BIOS Interrupts And Functions	741
Appendix B - EGA/VGA BIOS Functions	797
Appendix C - VESA Standard Functions	829
Appendix D - DOS API Interrupts And Functions	837
Appendix E - Multiplexer-Interrupts 2FH	928
Appendix F - EMM Functions	941
Appendix G - XMS Functions	965
Appendix H - Mouse Driver Functions	975
Appendix I - Hardware Interrupts	1002
Appendix J - Introduction To Number Systems	1004
Appendix K - Companion CD-ROM Program Listings	1006
